

Project Design Phase Proposed Solution Template

Date	02 July 2026
Roll No	23A51A42C0
Project Name	Visitor Management System
Maximum Marks	2 Marks

Proposed Solution:

The Visitor Management System in ServiceNow automates the visitor registration and approval process. Employees can submit visitor requests through the Service Catalog, and the system routes them for approval using Flow Designer. It updates the request status, sends email notifications, and maintains visitor check-in and check-out records. This solution improves efficiency, security, and visitor tracking.

Objectives:

- Automate visitor request processing.
- Reduce manual work.
- Improve visitor tracking.
- Enhance security.

Key Features:

- Service Catalog.
- Approval Workflow
- Flow Designer
- Email Notifications
- Visitor Tracking

Expected Benefits:

- Faster processing
- Improved efficiency
- Better security

- Reduced manual errors
- Enhanced transparency

PROPOSED SOLUTION TEMPLATE

Project Title	: <u>Visitor Management System</u>	Date	: _____
Prepared By	: _____	Version	: _____

 **1. SOLUTION OVERVIEW**

The Visitor Management System in ServiceNow automates visitor registration, approval, and tracking. Employees can submit visitor requests through the Service Catalog, and the system routes them for approval. It updates request status, sends email notifications, and maintains visitor check-in and check-out records, improving efficiency and security.

 **2. OBJECTIVES**

- Automate visitor request processing.
- Reduce manual work and paperwork.
- Improve visitor tracking and security.
- Enhance user and visitor experience.

 **3. TARGET USERS / STAKEHOLDERS**

- Employees (who request visitors)
- Hosts / Managers (who approve requests)
- Security Team (who manages check-in/out)
- Visitors

 **4. PROPOSED SOLUTION DESCRIPTION**

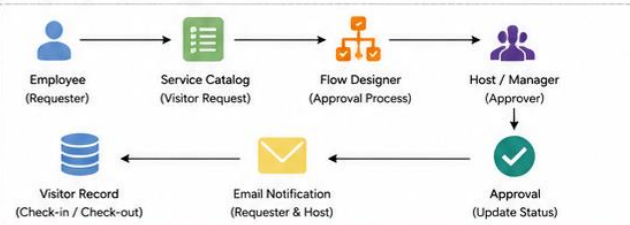

The system allows employees to raise visitor requests through the Service Catalog. The request is automatically sent to the host/manager for approval using Flow Designer. Once approved, the system sends email notifications, updates the status, and allows security to check-in and check-out visitors. All visitor details are tracked and maintained for reporting and audit.

 **5. KEY FEATURES / FUNCTIONALITIES**

- Service Catalog for visitor requests
- Automated approval workflow
- Flow Designer automation
- Email notifications
- Visitor check-in and check-out
- Request tracking and reporting

 **6. SOLUTION ARCHITECTURE**

High-level architecture of the solution.

```
graph LR; Employee[Employee (Requester)] --> ServiceCatalog[Service Catalog (Visitor Request)]; ServiceCatalog --> FlowDesigner[Flow Designer (Approval Process)]; FlowDesigner --> HostManager[Host / Manager (Approver)]; HostManager --> Approval[Approval (Update Status)]; Approval --> EmailNotification[Email Notification (Requester & Host)]; EmailNotification --> VisitorRecord[Visitor Record (Check-in / Check-out)];
```

 **7. IMPLEMENTATION APPROACH**

The solution will be implemented in the following phases:

Phase	Activity / Task	Description	Deliverable	Timeline
1. Planning	Requirement Gathering	Gather requirements and finalize scope	Requirement Document	1 Week
2. Design	Solution Design	Design workflows, forms and processes	Solution Design Document	1 Week
3. Development	Configuration & Development	Build catalog, workflows, and automation	Configured Solution	2 Weeks
4. Testing	Testing	Test the solution and fix issues	Test Report	1 Week
5. Deployment	Go-Live	Deploy to production and support	Live Solution	1 Week

 **8. EXPECTED BENEFITS**

- Faster visitor request processing.
- Improved security and access control.
- Reduced manual effort and paperwork.
- Better transparency and tracking.
- Enhanced employee and visitor experience.
