

Project Design Phase-II

Data Flow Diagram & User Stories

Date	02 July 2026
Team ID	23A51A42C0
Project Name	Visitor Management System
Maximum Marks	4 Marks

Data Flow Diagrams:

Visitor Management System represents how visitor information moves through the system. It illustrates the flow of data from employees submitting visitor requests through the **ServiceNow Service Catalog** to the approval process, visitor record management, and check-in/check-out activities. The DFD shows how data is processed, stored, and updated while ensuring secure and efficient visitor management. It also highlights the interactions between employees, hosts/managers, the security team, and the ServiceNow system, providing a clear understanding of the overall workflow and data movement within the application.

User Stories – Visitor Management System

USV-1: As an employee, I can submit a visitor request through the Service Catalog.

USV-2: As an employee, I can provide all required visitor details before submitting the request.

USV-3: As an employee, I can upload supporting documents (such as visitor ID proof or invitation letter) with my visitor request.

USV-4: As an employee, I can view dynamic form fields based on the selected purpose of visit.

USV-5: As an employee, I can track the status of my submitted visitor request.

USV-6: As an employee, I can receive email notifications about my visitor request status.

USV-7: As a host/manager, I can view visitor requests assigned to me for approval.

USV-8: As a host/manager, I can approve or reject visitor requests.

USV-9: As a host/manager, I can provide comments while approving or rejecting a visitor request.

USV-10: As a security officer, I can verify approved visitors during check-in.

USV-11: As a security officer, I can record visitor check-in and check-out details.

USV-12: As an administrator, I can create and manage Visitor Request catalog items.

USV-13: As an administrator, I can configure catalog variables and variable sets.

USV-14: As an administrator, I can configure Catalog UI Policies for dynamic forms.

USV-15: As an administrator, I can automate the visitor request process using Flow Designer.

USV-16: As an administrator, I can create and maintain the Visitor Request table.

USV-17: As an administrator, I can configure automated email notifications for visitor requests.

USV-18: As an administrator, I can generate reports and monitor visitor request performance.
